Ways to Report Invasive Plants

The most effective time to control invasive species is when they are first introduced. Identifying invasive plants early on allows us to respond quickly and prevent further spread. One of the best ways to help control efforts is to report suspicious plants!

If you have an iNaturalist account: use the app upload an observation. Non-native plants are automatically added to the Introduced Plant Species of Alaska group in iNaturalist! We regularly monitor community observations on the app.

If you are comfortable making a phone call: You can report an invasive species siting to Alaska Department of Fish & Game by calling 1-877-INVASIV (1-877-468-2748)

If you're at your computer: fill out the Integrated Pest Management Submission Form through AK Cooperative Extension Service at plw.man.mybluehost.me or using the QR code

TAKING A GOOD PHOTO

To help with identification and context, include photos of:

- The environment
- The whole plant with something for scale (a hand, phone, etc)
- The front and back of leaves
- Berries and flowers (if present)
- For trees, a close-up of the bark
